

# Ancienne Belgique 7 Lava

## COLOUR

Black with nuances. An intense blend of lava grey and black shades

## Product description

The bricks are formed individually in the unsanded mould to a solid mass, pressed from clay of alluvial origin from an area located in the Scheldt basin and fired in a tunnel oven at a temperature of approximately 1180°C. On the narrow side the bricks have an unsanded surface structure. The shape is slightly irregular. Finally the bricks are processed until they have acquired a weathered shape, due to which the paver surface leaves a rustic, aged impression.

## TECHNICAL CHARACTERISTICS

The pavers are delivered with the following characteristics, in accordance with the CE and UKCA mark:
